

CENTRO|P premium
CLAMPING SYSTEMS FROM FAHRION

CENTRO|P premium

Consistently One Step Ahead

Welcome to the world of high-precision machining with customer benefits, where we are always looking to improve.

As part of our CENTRO|P premium program, we offer you customised clamping systems, each with its own individual strengths and for a variety of applications.

Take advantage of other benefits, such as our FAHRION | Protect coating, tried and tested a million times, which is now also used on chucks and on clamping nuts. Pioneering technology that protects your complete tool clamping system and keeps it accurate and efficient for a long time.

MPC / DPC, CYLINDRICAL TOOL EXTENSIONS

Slim, Long, and Accurate - the Perfect Complement to the System

MPC / DPC Cylindrical Tool Extensions are particularly suitable for precision machining in hard-to-reach places and set standards in the areas of concentricity, set-up time and flexibility.

Instead of expensive special tools, a single change in length is often sufficient, which can be clamped more or less deeply into a CENTRO|P chuck as required.

MPC / DPC, CYLINDRICAL TOOL EXTENSIONS

Features

Cylindrical extensions are ideal for flexible lengths with existing holders.

This can easily save time and costs for complex special geometries.

Basically, the longer the projection the more important the damping becomes with tool holders. Additional interfaces (extension in the basic chuck via high-precision collet chuck) mean additional damping.

However, additional interfaces also mean poorer concentricity. When using the AFC holders as a basis, the concentricity can be set and thus optimised.
